

DuoCron ERP for **Logistics** & **Transport Industry**

Comprehensive Logistics Operations, Simplified

An All-in-One ERP Solution Designed for FTL, LTL, Fleet, and Transportation Enterprises

Introduction

DuoCron ERP, powered by ERPNext, is a robust logistics management platform built exclusively for transport and fleet-oriented businesses – handling everything from shipment scheduling, vehicle oversight, journey monitoring, fuel administration, cost management, and client transparency.

Whether your business handles FTL (Full Truck Load) movements, LTL (Part Truck Load) shipments, or final-leg deliveries, DuoCron ERP works to simplify day-to-day logistics tasks, cut down operating expenses, and enhance on-time delivery performance through live monitoring and intelligent automation.

With capabilities such as real-time GPS positioning, electronic fuel vouchers, driver assignment tools, tyre maintenance tracking, supplier access portals, and unified expense management, logistics firms can function with total clarity and precision. The platform brings together vehicles, drivers, storage facilities, and clients under one unified system – guaranteeing seamless and accurate logistics operations.

Engineered for adaptability and growth, DuoCron ERP equips transport businesses with AI-driven intelligence, self-running workflows, and live performance dashboards – enabling smarter, quicker, and more cost-effective logistics management.

What Makes DuoCron ERP Sets Apart?

✔ ERP is free, Unlimited user licenses

✔ Fully customizable to your workflows

✔ Built-in Logistics Industry Specific Features

✔ Seamless integrations with GPS, fuel cards & APIs

10+ Years of Experience

24*7 Customer Support

Worldwide Presence

We Understand Your Challenges

■ Disorganized Dispatch Operations

Manual journey scheduling and weak coordination among vehicles, drivers, and clients result in holdups and operational inefficiencies.

■ Lack of Real-Time Visibility

Inadequate monitoring of vehicles, trips, or delivery progress leads to flawed decision-making and unhappy customers.

■ Driver & Workforce Management Issues

Handling driver assignments, attendance, documentation, and performance through manual processes creates regulatory and operational vulnerabilities.

■ Maintenance & Asset Tracking Gaps

Surprise repairs, tyre mishandling, and unavailability of spare parts drive up downtime and maintenance expenditures.

■ Fuel Leakage & Uncontrolled Expenses

Unvalidated fuel invoices, petty cash disbursements, and informal expense tracking push up running costs and trigger financial setbacks.

■ Low Fleet Utilization

Inactive vehicles, poor trip scheduling, and unoptimized routes diminish overall productivity and profit margins.

■ Vendor & Settlement Complexities

Dealing with multiple carriers, ambiguous billing structures, and delayed payments generates disputes and disrupts cash flow.

■ Poor Data & Reporting

Fragmented data spread across various spreadsheets makes it challenging to monitor trip costs, profit margins, and overall business performance.

Key Features

Transport & Trip Management

Schedule, build, and oversee trips from a centralized platform. Assign vehicles and drivers, define routes, and monitor trip progress live for efficient and hassle-free dispatch operations.

Live GPS Vehicle Tracking

Monitor vehicles in real time with location updates, route visualization, stoppage notifications, and ETA tracking. Achieve full visibility over every active trip on the road.

Tyre Lifecycle Management

Oversee tyre procurement, usage patterns, rotation cycles, and replacements. Minimize tyre-related costs and enhance vehicle safety through structured lifecycle monitoring.

Vendor & Partner Integration

Streamline transporter agreements, invoicing, and payment settlements. Manage multiple vendors through a unified portal with full cost transparency and tracking.

Fleet Management System

Maintain thorough vehicle records covering documentation, service schedules, usage history, and performance metrics to maximize fleet output and reliability.

Fuel Management with Voucher Control

Digitize fuel approvals and voucher processing. Track per-trip fuel usage, eliminate misuse, and reconcile expenditures precisely using verified transaction entries.

Driver Management & Allocation

Maintain driver profiles, licensing records, duty rosters, and availability status. Match the appropriate driver to the right vehicle while ensuring full compliance oversight.

Cash & Expense Management

Track trip advances, toll charges, and on-road expenses in real time. Prevent cash leakage and produce accurate trip-level profitability reports with ease.

Key Features

Last-Mile Delivery Mobile App

Equip drivers and field delivery teams with a mobile application for proof-of-delivery capture, live status reporting, and seamless real-time communication.

Spare Parts Management

Monitor spare part inventory, maintenance components, and service records to minimize vehicle breakdowns.

Warehouse & Inventory Management

Oversee goods movement, stock quantities, and storage locations with precise inventory control.

Alerts & Geo-Fencing

Receive automated notifications for over-speeding incidents, route deviations, delivery delays, and unauthorized vehicle stoppages.

MIS & Analytics Dashboard

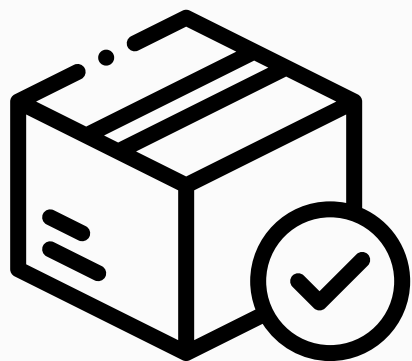

Access real-time dashboards covering trip activity, operational costs, fleet utilization, and performance metrics

Customer Shipment Tracking Portal

Offer customers direct access to live shipment tracking, estimated arrival updates, and clear delivery status.

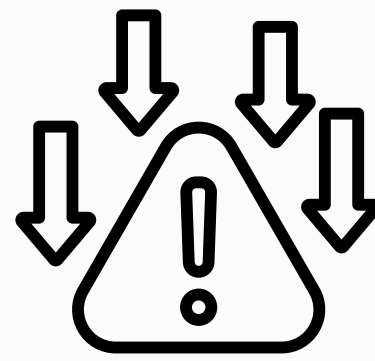

Real Benefits, Real Success

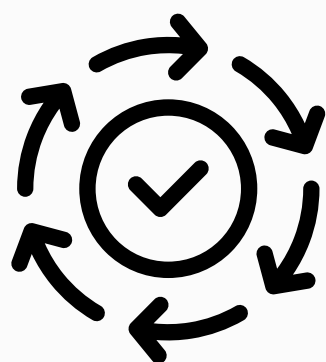

Improves On-Time Deliveries

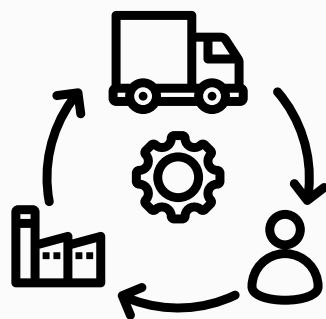

Reduces Operational Costs

Minimizes Revenue Leakage

Increases Fleet Utilization

Optimizes Trip Profitability

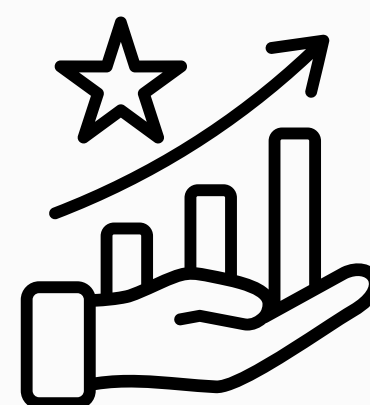

Strengthens Vendor Collaboration

Enhances financial transparency

Improves Customer Experience

Enables Data-Driven Decisions
